Preferred[™]
SERIES

This duct mounted electronic air cleaner is available in 1350 through 2000 CFM models. EACB also comes in 4 sizes (120V) and 1 size (240V) to meet your furnace and fan coil application needs. Designed to remove airborne particles down to 1 micron in size, the EACB effectively removes such particles as dust, dirt, lint, and pollen from your customer's home.

The electronic components of the Model EACB convert the 120V or 240V power supply to a 6200V VDC that imparts an electrical charge to airborne particles such as smoke, bacteria, pollen, and dust. This charge causes these particles to attach themselves to the charged collecting plates, thus cleaning the airstream.

The resulting high cleaning efficiency enables the EACB to also trap the smoke and extremely fine dust particles (as small as 1 micron) that are not removed by an ordinary throw-away-type filter. These ultra-fine particles are the cause of most of the soil (smudging) of walls, draperies, curtains, etc.

The Model EACB is designed to adapt to various types of return-air duct systems and can be mounted in either a vertical or horizontal position.

FEATURES/BENEFITS

Compact - Four cabinet sizes meet most application requirements.

Fully Assembled - EACB unit is fully assembled and ready for installation.

Low Operating Costs - The monthly cost of operating these electronic air cleaner is less than that for a 60-watt light bulb.

Clean Cell Reminder - These units are equipped with a month indicator to remind the homeowner when to clean the cells.

Airflow Sensor - The EACB comes standard with airflow sensor.

Power Cord - This unit comes with a 6-ft (1.8 m) power cord to help with ease of installation.

Versatility - Airflow direction through the EACB can be reversed by simply reversing the pre-filter and cell assemblies within the cabinet.

Easily Cleaned - Soak and rinse cells; vacuum pre-filters.

Application Possibilities - Unit can be installed in a horizontal or vertical position, which makes it equally adaptable to basement, horizontal, downflow, or standard upflow applications. Furnace can be mounted on top of air cleaner without adapters.

Solid-State Power Supply - Power supply is a highly reliable state-of-the-art, solid-state, high-voltage device.

Durable Cabinet - Heavy-gauge steel cabinet supports up to 400 lb (181 kg) when installed beneath an upflow furnace.

Agency Listed - Model EACB Electronic Air Cleaner is cULus listed.

Financing - Eligible for consumer financing program.
